SAFETY CHECK-OUT

After correcting the original service problem, perform the following safety checks before releasing the set to the customer:

-2-

- 1. Check the area of your repair for unsoldered or poorly-soldered connections. Check the entire board surface for solder splashes and bridges.
- 2. Check the interboard wiring to ensure that no wires are "pinched" or contact high-wattage resistors.
- 3. Look for unauthorized replacement parts, particularly transistors, that were installed during a previous repair. Point them out to the customer and recommend their replacement.
- 4. Look for parts which, though functioning, show obvious signs of deterioration. Point them out to the customer and recommend their replacement.
- 5. Check the line cord for cracks and abrasion. Recommend the replacement of any such line cord to the customer.
- 6. Flexible Circuit Board Repairing
- Keep the temperature of the soldering iron around 270°C during repairing.
- Do not touch the soldering iron on the same conductor of the cir cuit board (within 3 times).
- Be careful not to apply force on the conductor when soldering or unsoldering.

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY MARK \triangle OR DOTTED LINE WITH MARK \triangle ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

SECTION 1 GENERAL

General

Locations of Controls

- 1 Caution lamp
- 2 Lens
 3 VISCA OUT jack
- 4 PROCESSOR jack

Precautions

• After operating the unit with an AC power adaptor, disconnect the AC power adaptor from the wall outlet if the set is not to be used for an extended period of time.

Brightness of a subject

Color Video Camera might not work with its best performance in a place where brightness exceeds the illumination range (such as a place exposed to direct sunlight).

Avoid specialized application

Avoid using Color Video Camera for monitoring application where it would be forced to focus on a stationary object for a long period of time. Also avoid focusing the camera on an extremely bright object such as sunlight or a fluorescent lamp. Otherwise the color filter might be damaged.

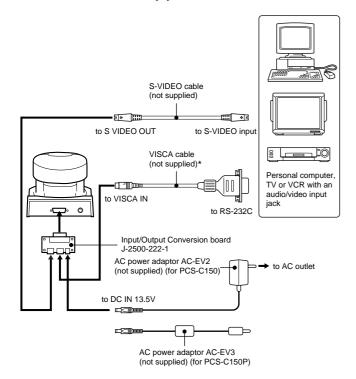

Precaution on copyright

Television programs, pictures, magazines, and other materials may be copyrighted. Unauthorized recording or storing of such materials violates the provision of the copyright laws.

Preparations

Connections

Be sure to use the tool board (J-2500-222-1) to connect to this unit. Connect the power supply, connect the tool board to the unit, and connect the terminals of the tool board to the personal computer, TV, or VCR equipped with an S-Video input. Some connections may require extra cables. Refer to the instructions manual of the equipment to be connected.

* When the video camera is connected to a personal computer with a VISCA cable, you can operate the video camera with the personal computer.

If you have a personal computer or video equipment with the S-Video input

You can connect it to your Color Video Camera with a commercially available S-video cable.

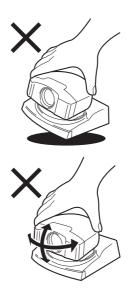

Notes

- You cannot connect your Color Video Camera to a personal computer that is not equipped with S-Video input jack.
 - And you might not be able to use your existing personal computer with your Color Video Camera unless you provide the computer with a video capture board and/or software.
 - Consult your computer dealer or manufacturer for details.
- To supply power to the tool board, use only the AC power adaptor that has plug of EIAJ type 4 (not supplied). Do not use any other AC power adaptor.

Polarity of the plug

- Do not grasp the camera head when carrying the video camera.
- Do not turn the camera head manually. Doing so will result in the camera malfunctioning.

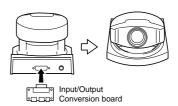

Installation

Be sure to place the main unit on a flat surface.

Turning on the Power

When the tool board is connected to this unit and power is supplied to the tool board, it will set into the POWER ON state and the camera will automatically face toward the lower right-hand side and then the front, which is the home position of the camera. (Pan/tilt reset action)

If the lamp at the side of the lens flashes umber

The micro computer inside the camera might not memorize the current pan/tilt position properly. Use Reset command to reset the pan/tilt position.

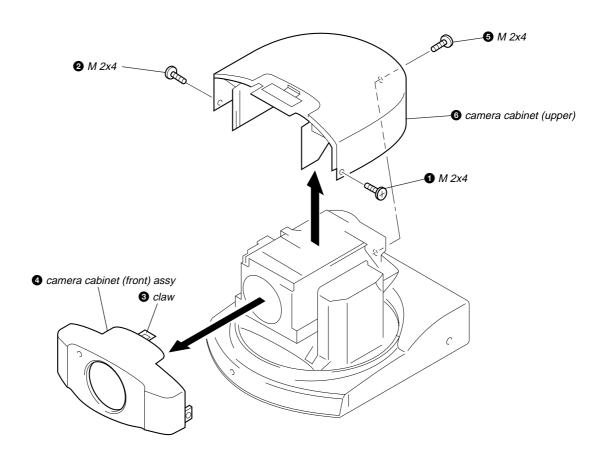

PCS-C150/C150P is controlled by VISCA communication. Refer to VISCA COMMAND LIST.

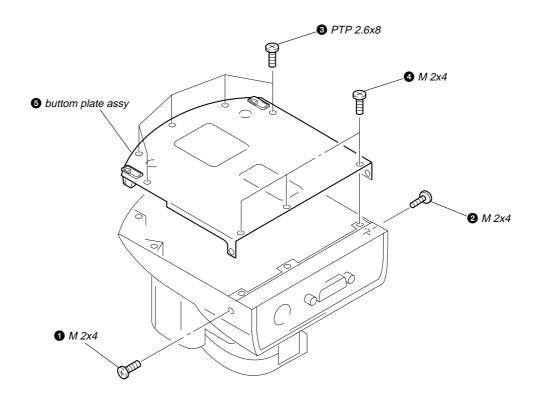

SECTION 2 DISASSEMBLY

Note: Follow the disassembly procedure in the numerical order given.

^{*1} Microcomputer IC in the adjusting remote commander except for µPD7503G-C56-12 (8-759-148-35) does not allow the page selecting. Replace the microcomputer in such a case.

^{*2} Remove the hexagonal screws of the D-SUB on the board before using the tool board.

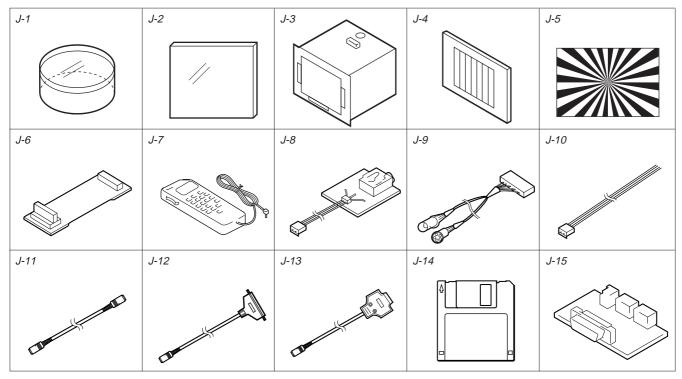

Fig. 6-1.

6-1-2. Preparations

Note: When adjusting only, it is not needed to remove the camera block from the pan tilt mechanism chassis.

The adjustments can be performed only by removing the camera cabinet.

- 1) Connect the equipments for adjusting as shown in Fig. 6-3.
- 2) Turning OFF the auto focus using the adjusting remote commander.
 - 1. Set data: 01 to page: 6, address: 25.
 (The auto focus will turn OFF. The focus can be adjusted using the focus button on the adjusting remote commander. But the HOLD switch must be set to OFF.)
 - 2. After completing the adjustment/operation check, set data: 00 to page: 6, address: 25.
- 3) To adjust the camera block only, there are two procedures.
 - 1. Adjust with the camera block mounted to the pan tilt mechanism chassis. (Fig. 6-2 (1), Fig. 6-3 (1))

Note: AT-21A (A) board must be removed before 28MHz original oscillation adjustment can be performed.

2. Remove the camera block from the pan tilt mechanism chassis and perform adjustment to the camera block only. (Fig. 6-2 (2), Fig. 6-3 (2))

Note: Be sure to change the data of page: D, address: 01 to 00 (NTSC) or 01 (PAL). Then, remove the camera block from the pan tilt mechanism chassis.

After this adjustment, be sure to perform the operation described in 6-2-20 and 6-2-22.

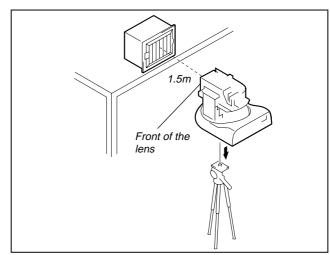

Fig. 6-2 (1).

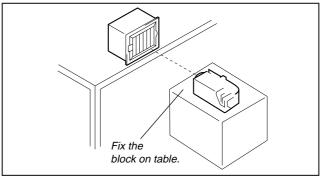

Fig. 6-2 (2).

Note: The camera block has no screw plate for tripod. So, fix the block on a table when adjusting.

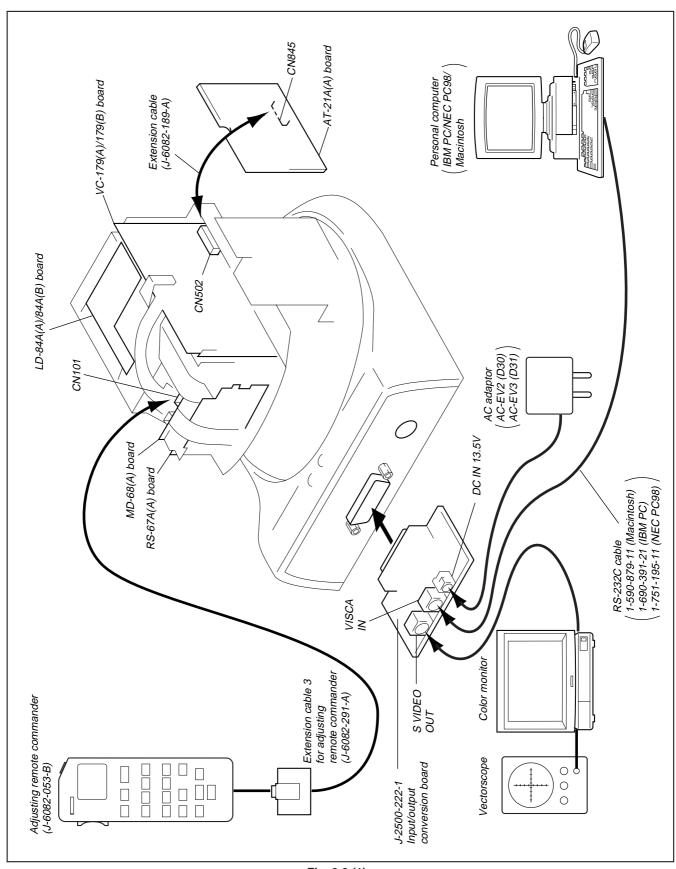

Fig. 6-3 (1).

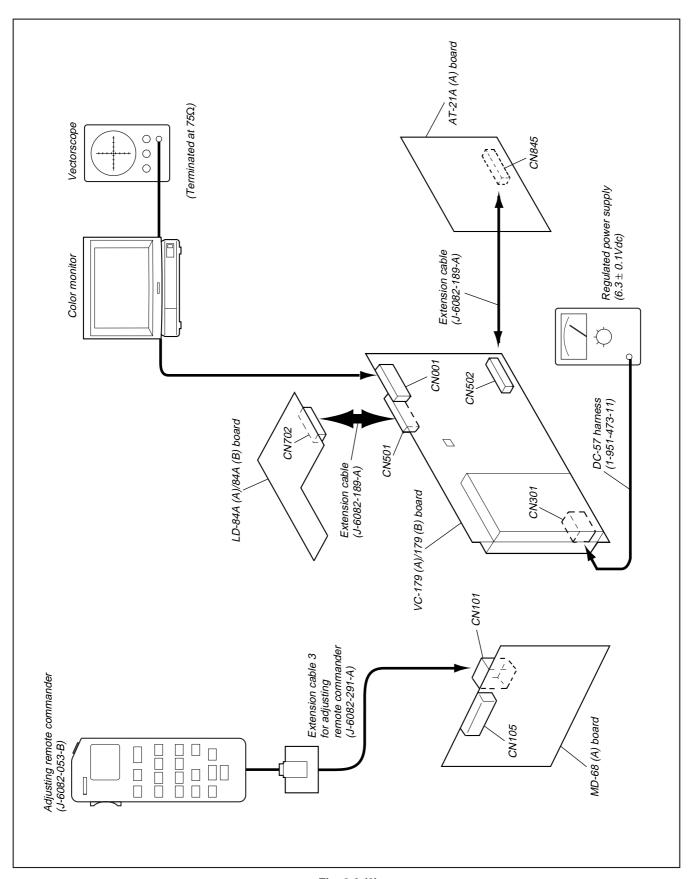

Fig. 6-3 (2).

6-1-3. Precautions

1. Adjusting Procedure

Adjust in the given order.

2. Subject

- 1) Color bar chart (Standard picture frame)
 Adjust the picture frame as shown in Fig. 6-4. if adjustments are performed using the color bar chart. (Standard picture frame)
- 2) White pattern (Standard picture frame) Remove the color bar chart from the pattern box, and so that the white pattern will be displayed. Don't touch the zoom switch.

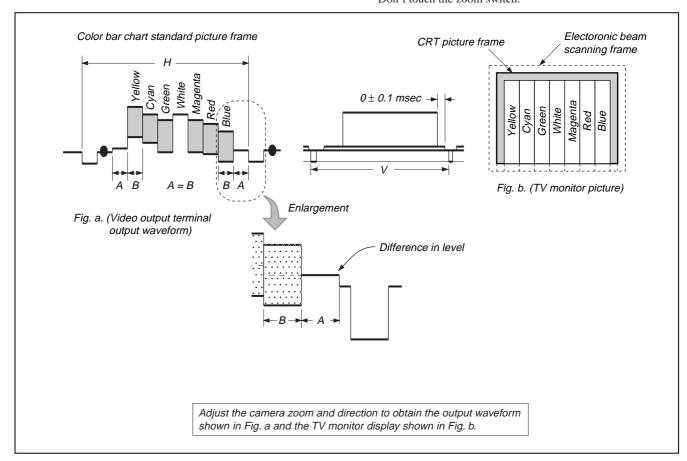

Fig. 6-4.

3) Chart for flange back adjustment Combine a white A0 size (1189 mm × 841 mm) paper to a black one, and make the chart shown in Fig. 6-5.

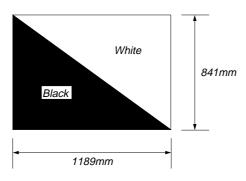

Fig. 6-5.

Note: Use the non-reflecting and non-glazing vellum paper whose size is more than A0, and make the boundary between white and black to be smoothly flat.

6-1-4. Adjusting Remote Commander

Use the adjusting remote commander to change the coefficient of the digital signal processing or the EVR data.

The adjusting remote commander uses the remote commander signal line (ECCP) to perform the bidirectional communication with the camera microprocessor. The effect data of the bidirectional communication must be written in the nonvolatile memory.

1. Using the adjusting remote commander

- 1) Connect the adjusting remote commander to the ECCP terminal (MD-68 (A) board CN101).
- 2) Adjust the HOLD switch of the adjusting remote commander to "HOLD" (SERVICE position).
 - If it has been properly connected, the LCD on the adjusting remote commander will display as shown in Fig. 6-6.
- 3) Operate the adjusting remote commander as follows.
 - Changing the page The page increases when the EDIT SEARCH + button is pressed, and decreases when the EDIT SEARCH - button is pressed. There are altogether 16 pages, from 0 to F.

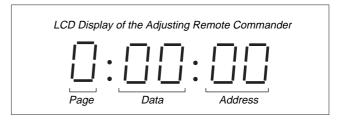

Hexadecimal notation	0	1	2	3	4	5	6	7	8	9	A	В	С	D	Е	F
LCD Display	0	1	2	3	Ч	5	5	7	8	9	R	Ь	С	Ь	Ε	F
Decimal notation Conversion value	0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

Table. 6-1.

- · Changing the address
 - The address increases when the FF ($\triangleright \triangleright$) button is pressed, and decreases when the REW (button is pressed. There are altogether 256 addresses, from 00 to FF.
- Changing the data (Data setting)
 - The data increases when the PLAY (▶) button is pressed, and decreases when the STOP (\blacksquare) button is pressed. There are altogether 256 data, from 00 to FF.
- Writing the adjustment data
 - The PAUSE button must be pressed to write the adjustment data (F page) in the nonvolatile memory.
- (The new adjustment data will not be recorded in the nonvolatile memory if this step is not performed.)
- 4) Select page: 6, address: 00, and adjust the data to 01. This releases the write protect of Page F, and enables the camera section (Addresses 01 to BF of page F) to be adjusted.
- 5) After completing all adjustments, turn off the main power supply once.

2. Precautions upon using the adjusting remote commander

Mishandling of the adjusting remote commander may erase the correct adjustment data at times. To prevent this, it is recommended that all adjustment data be noted down before beginning adjustments and new adjustment data after each adjustment.

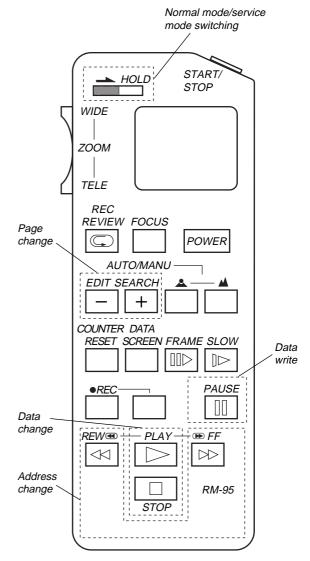

Fig. 6-6. Adjusting remote commander RM-95 (J-6082-053-B)

6-1-5. Page D Address List

Note 1: The adjustment data initial value is the data input before performing camera section adjustments (Page D) if the Page D data has been erased due to some reason.

Note 2: The data written in the adjustment data memo comumn are fixed.

After adjusting, check that these data have not been rewritten by mistake.

Note 3: In some case, data have been input to the page D address 71 to FF. This has no relation to the adjustment.

Note 4: No mark : PCS-C150 series
() : PCS-C150P series

Note 5: * PCS-C150 (NTSC): 04 (Only Camera Block 00) PCS-C150P (PAL): 05 (Only Camera Block 01)

Caution: When adjusting the camera with only the camera block mounted, use the data for Only Camera Block.

After the adjustment, assemble the camera block to the

After the adjustment, assemble the camera block to the pan tilt mechanism chassis, then input the above data and complete the procedure.

(Refer to 6-2-20. Page D Data Modification 2)

6-1-6. Page F Address List

Note 1: The data already listed in the adjustment data memo column are fixed values.

Note 2: The adjustment data initial values are values just after executing "Page F Data Initialization" and "Page F Data Modification". They are different from the values after executing all adjustments.

Note 3: In some cases, data have been input to the page F addresses C0 to EF. This has no relation to the adjustments.

Note 4: No mark: PCS-C150 series

Table. 6-4 (3).

Table. 6-4 (4).

6-1-8. Data Processing

The calculation of the adjusting remote commander display data (hexadecimal notation) is required for obtaining the adjustment data of some adjustment itemes. In this case, after converting the hexadecimal notation to decimal notation, calculate and convert the result to hexadecimal notation, and use it as the adjustment data. Table. 6-5. indicates the hexadecimal notation-the decimal notation calculation table.

He	xagecimal notation-Dec	imal r	notati	on											② ↓		
	The lower digits of the hexadecimal notation	0	1	2	3	4	5	6	7	8	9	A	В	С	D	Е	F
	The upper digits of the hexadecimal notation											(月)	(b)	(C)	(d)	(E)	(F)

	9	144	145	146	147	148	149	150	151	152	153	154	155	156	157	158	159
	A (F)	160	161	162	163	164	165	166	167	168	169	170	171	172	173	174	175
①→	В (b)	176	177	178	179	180	181	182	183	184	185	186	187	188	189	190	191
	C (c)	192	193	194	195	196	197	198	199	200	201	202	203	204	205	206	207
	D (d)	208	209	210	211	212	213	214	215	216	217	218	219	220	221	222	223
	E (<i>E</i>)	224	225	226	227	228	229	230	231	232	233	234	235	236	237	238	239
	F (F)	240	241	242	243	244	245	246	247	248	249	250	251	252	253	254	255

Note: () indicate the adjusting remote commander display.

(Example) In the case that the adjusting remote commander display is BD (bd).

As the upper digit of the hexadecimal notation is B (b), and the lower digit is D (d), the intersection "189" of the 1 and 2 in the above table is the decimal notation to be calculated.

Table. 6-5.

6-2. CAMERA SYSTEM ADJUSTMENT

6-2-1. Power Supply Voltage Check (VC-179 (A)/179 (B) board)

0.1.	0.4:
Subject	Option
Measuring instrument	Digital voltmeter
MT5V check	
Measurement point	Pins 6 and 8 of CN501
Specified value	4.9 ± 0.1 Vdc
D3.5V check	
Measurement point	Pin (3) and (4) of CN504
Specified value	3.55 ± 0.1 Vdc
CAM4.9V check	
Measurement point	Pin ⑦ and ⑱ of CN504
Specified value	4.9 ± 0.1 Vdc
CAM15V check	
Measurement point	Pin ① of CN401
Specified value	15.2 ± 0.3 Vdc
CAM – 8.5V check	
Measurement point	Pin 3 of CN401
Specified value	-8.5 + 0.25 Vdc

Checking method:

 Check that each power supply voltage satisfies the specified value.

6-2-2. Page D Data Initialization

Initializing method:

- 1) Page: 1, address: 00, data: 01.
- 2) Check that the data of page: 1, address: 03 is 00.
- 3) PCS-C150 (NTSC)

Set data: 01 to page: 1, address: 02, and press the PAUSE button of the adjusting remote commander.

• PCS-C150P (PAL)

Set data: 02 to page: 1, address: 02, and press the PAUSE button of the adjusting remote commander.

- 4) Check that the data of page: 1, address: 03 is 01.
- 5) Set data: 00 to page: 1, address: 02, and press the PAUSE button of the adjusting remote commander.
- 6) After performing "Page D data modification", perform all the adjustments of the camera section (page D).

6-2-3. Page D Data Modification 1

The data (initial data) that is automatically written on page D after the initialization of the page D data will differ according to some camera micro processor versions. Change the data by manual input, arrange it.

Note 1: When changing the data, to write the data to the non-volatile memory, press the PAUSE button of the adjusting remote commander every time the new data is set.

PCS-C150

PCS-C150P

Address	Data
01	*
02	90
03	03

Address	Data
01	*
02	90
03	03

Note 2: *PCS-C150: 00

PCS-C150P: 01

After the camera adjustment, input the data given below.

PCS-C150: 04 PCS-C150P: 05

(Refer to 6-2-20. Page D Data Modification 2.)

6-2-4. Page F Data Initialization

Note: It is necessary to perform all adjustments of the camera section from the beginning again if the data of page F has been initialized

Initializing method:

- 1) Page: 6, address: 00, data: 01.
- 2) Check that the data of page: 6, address: 11 is 00.
- 3) PCS-C150 (NTSC)

Set data: 2D to page: 6, address: 01, and press the PAUSE button of the adjusting remote commander.

• PCS-C150P (PAL)

Set data: 2F to page: 6, address: 01, and press the PAUSE button of the adjusting remote commander.

- 4) Check that the data of page: 6, address: 11 is 01.
- 5) Set data: 00 to page: 6, address: 01, and press the PAUSE button of the adjusting remote commander.
- 6) After performing "Page F data modification", perform all the adjustments of the camera section (page F).

6-2-5. Page F Data Modification

The data (initial data) that is automatically written on page F after the initialization of the page F data will differ according to some camera micro processor versions. Change the data by manual input, and

arrange it.

Note 1: When changing the data, to write the data to the non-volatile memory, press the PAUSE button of the adjusting remote commander every time the new data is set.

Note 2: When changing address: 00, set the data of page: 6, address: 00 to 80.

PCS-C150

PCS-C150P

Address	Data	Ad
24	77	
70	47	

Address	Data
24	8A
70	47

[Distinguishing the Camera Micro Processor (VC-179 (A)/ 179 (B) Board IC502) Versions]

Each version can be distinguished by looking at the part name of the camera micro processor or the data of page: 6, address: 10.

Version	Part Name	Page: 6 Address: 10
Ver. 2.0	SC424624	20

6-2-6. 28 MHz Original Oscillation Adjustment (VC-179 (A)/179 (B) board)

Adjust the 28 MHz oscillation of the synchronization clock. If the oscillation is not 28 MHz, the period will be inaccurate or the image will not be in color.

Subject	Not required
Measurement Point	CL401 (IC402 12) pin)
Measuring Instrument	Frequency counter
Adjustment Page	F
Adjustment Address	22
Specified Value	14318181 ± 71Hz (NTSC)
	14187500 ± 70Hz (PAL)

Adjusting method:

- 1) Set data: 01 to page: 6, address: 00.
- 2) Change the data of page: F, address: 22 to adjust the oscillation frequency to 14318181 ± 71 Hz (14187500 ± 70 Hz).

6-2-7. V SUB Adjustment

Set the CCD imager V SUB voltage to the voltage specified for the imager.

Subject	Not required
Adjustment Page	F
Adjustment Address	04

Adjusting method:

- Read the V SUB voltage code of the CCD imager.
 Obtain the corresponding V SUB data from the following table.
- 2) Set data: 01 to page: 6, address: 00.
- 3) Set the V SUB data to page: F, address: 04.
- 4) Press the PAUSE button of the adjusting remote commander.

	V SUB			V SUB	
Voltage Code	Data	Voltage (Vdc)*1	Voltage Code	Data	Voltage (Vdc)*1
e	70	9.0	q	AC	14.0
f	77	9.5	r	B2	14.5
g	7C	10.0	s	B8	15.0
h	82	10.5	t	BE	15.5
j	88	11.0	u	C4	16.0
k	8E	11.5	v	CA	16.5
1	94	12.0	w	D0	17.0
m	9A	12.5	X	D6	17.5
n	A0	13.0	У	DD	18.0
p	A6	13.5	Z	E2	18.5

6-2-8. VRG Adjustment

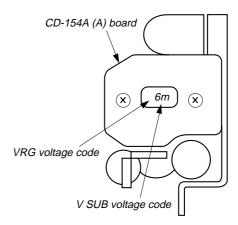

Set the CCD imager V RG voltage to the voltage specified for the imager.

Subject	Not required
Adjustment Page	F
Adjustment Address	05

Adjusting method:

- Read the VRG voltage code of the CCD imager.
 Obtain the corresponding VRG data from the following table.
- 2) Set data: 01 to page: 6, address: 00.
- 3) Set the VRG data to page: F, address: 05.
- 4) Press the PAUSE button of the adjusting remote commander.

	VRG	
Voltage Code	Data	Voltage (Vdc)*2
1	34	1.0
2	4E	1.5
3	69	2.0
4	83	2.5
5	9E	3.0
6	B8	3.5
7	D3	4.0

(Example) When "6m" is displayed:

The V SUB voltage code is "m" and therefore the V SUB data will be "9B".

The VRG voltage code is "6" and therefore the VRG data will be "B8".

Fig. 6-7.

6-2-9. Flange Back Adjustment

The flange back adjustment for the inner focus lens is performed automatically.

	Chart for flange back adjustment	
Subject	$/2000 \pm 5$ mm from the front side \setminus	
	of the lens	
	Luminance: 300 ± 50 lux	
Measurement Point	Check the operation on the	
Measuring Instrument	TV monitor	
Adjustment Page	F	
Adjustment Address	16, 17, 18, 19, 1A, 1B	

Adjusting method:

- Check that the flange back adjustment chart center and the exposure display center coincide at both zoom lens TELE end and WIDE end.
- 2) Set data: 01 to page: 6, address: 00.
- 3) Check that the data of page: 6, address: 21 is 00.
- 4) Check that the page: F, address: 16 to 1B data is at the initial value. (Refer to Table. 6-3. "Page F address list".)
- 5) Set data: 13 to page: 6, address: 01 and press the PAUSE button of the adjusting remote commander.
- 6) Set data: 15 to page: 6, address: 01, and press the PAUSE button of the adjusting remote commander.

(The adjustment data is automatically input to page: F, addresses: 16 to 1B.

Check that the data of page: 6, address: 21 is 01.
 (Display indicating flange back adjustment completion)

Processing after completing adjustments

1) Turn off the main power supply.

6-2-10. Flange Back Check

Subject	Siemens star	
	(2 6 4 6 (64 1)	
	(2m from the front of the lens)	
Measurement Point	TV monitor	
Measuring Instrument	1 v monitor	
Specified Value	Focused at the TELE end and	
	WIDE end.	

Checking method:

- 1) Place the Siemens star 2m from the front of the lens.
- 2) To open the IRIS, decrease the luminous intensity to the Siemens star up to a point before noise appears on the image.
- 3) Shoot the siemens star with the zoom TELE end.
- 4) Turn ON the auto focus.
- 5) When the lens is focused, turn OFF the auto focus.
- 6) Shoot the siemens star with the zoom WIDE end.
- 7) Check that the lens is focused.
- **Note 1:** When the auto focus is ON, the lens can be checked if it is focused or not by observing the data on page A of the adjusting remote commander.
 - 1) Set data: 0C to page: 6, address: 02.
 - Page A shows the state of the focus.

A: 00: XX Odd: Focused Even: Unfocused

Processing after compleating adjustments

1) Set data: 00 to page: 6, address: 02.

6-2-11. Hall Adjustment

To eliminate the differences in the outputs of the hall element attached to the iris for detecting the position of the lens iris, adjust the hall AMP gain and hall offset.

Subject	Not required
Measurement Point	Lower 2 digits of the date of the page
Measuring Instrument	A displayed
Adjustment Page	F
Adjustment Address	06, 07
Specified Value	33 to 37 during IRIS OPEN
Specified value	B4 to B8 during IRIS CLOSE

Adjusting method:

- 1) Set data: 01 to page: 6, address: 00.
- 2) Set data: 03 to page: 6, address: 02.
- 3) Set data: 03 to page: 6, address: 01, and press the PAUSE button of the adjusting remote commander.
- 4) Set data: 80 to page: F, address: 07, and press the PAUSE button of the adjusting remote commander.
- 5) Set data: 40 to page: F, address: 06, and press the PAUSE button of the adjusting remote commander.
- 6) Read the page A display data, and this data is named W2.
- 7) Set data: 30 to page: F, address: 06, and press the PAUSE button of the adjusting remote commander.
- 8) Read the page A display data, and this data is named W1.
- 9) Set data: 01 to page: 6, address: 01, and press the PAUSE button of the adjusting remote commander.
- 10) Read the page A display data, and this data is named K1.
- 11)Set data: 40 to page: F, address: 06, and press the PAUSE button.
- 12) Read the page A display data, and this data is named K2.
- 13) Convert W1, W2, K1, K2 to decimal notation, and obtain W1', W2', K1', K2'. (Refer to Table. 6-5. "Hexadecimal notationdecimal notation conversion table".)
- 14) Calculate X1' using the following equations (decimal notation calculation).

$$X1' = \frac{2064 + (48 \times A') - (16 \times B')}{A'}$$
 Equation 3

- 15) Convert X1' to hexadecimal notation, and obtain X1. (Round off to one decimal place)
- 16) Set data: X1 to page: F, address: 06, and press the PAUSE button of the adjusting remote commander.
- 17) Change the data of page: F, address: 07, and adjust the page A display data to "35".
- 18) Press the PAUSE button of the adjusting remote commander.
- 19) Set data: 03 to page: 6, address: 01, and press the PAUSE button of the adjusting remote commander.
- 20) Read the page A display data, and this data is named W0. If W0 lies within the "B4" to "B8" range, perform "Processing after completing adjustments". If it lies outside the range, perform the following adjustments.
- 21) Convert W0 to hexadecimal notation, and obtain W0'.
- 22) Calculate X2' using the following equations (decimal notation calculation).

$$X2' = \frac{(129 - B') \times (X1' - 48) + 48 \times C}{C'}$$
..... Equation 5

(X1' and B' are values obtained from equations 2 and 3)

- 23) Convert X2' to hexadecimal notation and obtain X2. (Round off to one decimal place)
- 24) Set data X2 to page: F, address: 06, and press the PAUSE button of the adjusting remote commander.
- 25) Change the data of page: F, address: 07, and adjust tha page A display data to "B6".
- 26) Press the PAUSE button of the adjusting remote commander.
- 27) Set data: 01 to page: 6, address: 01, and press the PAUSE button of the adjusting remote commander.
- 28) Check that the page A display data lies within the "33" to "37" range.

Processing after Completing Adjustments

1) Set data: 00 to page: 6, address: 01, and press the PAUSE button of the adjusting remote commander.

6-2-12. Picture Frame Setting

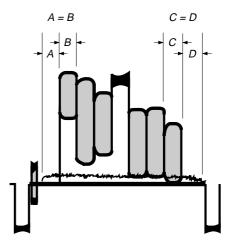

Subject	Color bar chart standard picture frame
Measurement Point	VIDEO OUT terminal
Measuring Instrument	Oscilloscope and TV monitor
Specified Value	A=B, C=D, t=0 +0.1 msec

Setting method:

- 1) Turn the auto focus off.
- 2) Adjust the focus.
- 3) Adjust the zoom and the camera direction, and set to the specified position.
- 4) Mark the position of the picture frame on the monitor display, and adjust the picture frame to this position in following adjustments using "color bar chart standard picture frame".

Check on the oscilloscope

1. Horizontal period

2. Vertical period

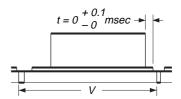

Fig. 6-8.

Check on the TV monitor

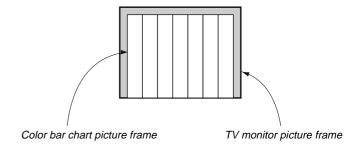

Fig. 6-9.

6-2-13. Color Reproduction Adjustment

Adjust the color separation matrix coefficient so that the proper color reproduction is produced.

Subject	Color bar chart standard picture frame
Measurement Point	VIDEO OUT terminal
Measuring Instrument	Vectorscope
Adjustment Page	F
Adjustment Address	08, 09, 0A, 0B
Specified Value	All color luminance points should settle within each color reproduction frame.

Adjusting method:

- 1) Set data: 01 to page: 6, address: 00.
- 2) Set data: 00 to page: 6, address: 03.
- 3) Set data: F1 to page: F, address: 10, and press the PAUSE button of the adjusting remote commander.
- Adjust the GAIN and PHASE of the vectorscope, and adjust the burst luminance point to the burst position of the color reproduction frame
- Change the data of addresses 08, 09, 0A and 0B of page: F, and settle each color luminance point in each color reproduction frame
- **Note 1:** Be sure to press the PAUSE button of the adjusting remote commander before changing the addresses.
 - If not, the new data will not be written to the memory.
- 6) Press the PAUSE button of the adjusting remote commander.

Processing after completing adjustments

- 1) Set data: E0 to page: F, address: 10, and press the PAUSE button of the adjusting remote commander.
- 2) Set data: 26 to page: F, address: 63, and press the PAUSE button of the adjusting remote commander.
- 3) Set data: 10 to page: 6, address: 03.

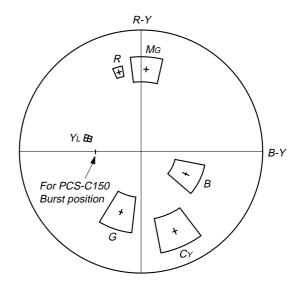

Fig. 6-10.

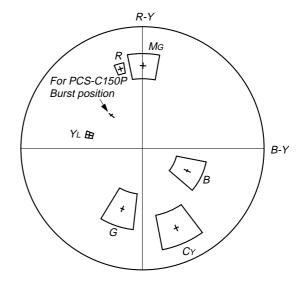

Fig. 6-11.

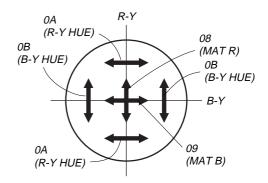

Fig. 6-12. Direction of the Movements of the Adjustment Address and Luminance Point.

6-2-14. Iris IN/OUT Adjustment (VC-179 (A)/179 (B) board)

For the unit to judge if the white balance is indoors or outdoors in auto white balance operations, measure the light level and write it in the EEPROM.

If the level is not correct, the white balance will not be accurate.

Subject	White pattern
Measurement Point	Lower 2 digits of the date of the page
Measuring Instrument	A displayed
Adjustment Page	F
Adjustment Address	13, 14

Adjusting method:

- 1) Set data: 01 to page: 6, address: 00.
- 2) Set data: 0E to page: 6, address: 02.
- 3) Set data: 0B to page: 6, address: 01, and press the PAUSE button of the adjusting remote commander.
- 4) Read the page A display data (Note 1), and take the upper two digits as D1 and the lower two as D2.
- Convert D1 to a decimal number and obtain D1'. (Refer to Table. 6-5. "Hexadecimal Notation-Decimal Notation Conversion Table".)
- 6) Calculate D3' using the following equations. (Equations 1 and 2 are for decimal notation calculation)

When
$$D2 \ge D0$$

 $D3' = D1' - 21$ Equation 1
When $D2 < D0$
 $D3' = D1' - 22$ Equation 2

- 7) Convert D3' to a hexadecimal number and obtain D3.
- 8) Set D3 to page: F, address: 13, and press the PAUSE button of the adjusting remote commander.
- 9) Set data: 09 to page: 6, address: 01, and press the PAUSE button of the adjusting remote commander.

(IND0.5 SHUTTER mode setting)

- 10)Read the page A display data (Note 1), and take the upper two digits as D4 and the lower two as D5.
- 11)Convert D4 to decimal number and obtain D4'. (Refer to Table. 6-5. "Hexadecimal Notation-Decimal Notation Conversion Table".)
- 12)Calculate D6' using the following equations. (Equations 3 and 4 are for decimal notation calculation)

- 13) Convert D6' to a hexadecimal number and obtain D6.
- 14)Set D6 to page: F, address: 14, and press the PAUSE button of the adjusting remote commander.
- **Note 1:** The right four digits of the display data at the right bottom side of the monitor TV is the LIGHT LEVEL data. If the lower digits change severely and cannot be read, record it on a tape once, play it back by frame feeding, and obtain the average value.

Processing after Completing Adjustments

- 1) Set data: 00 to page: 6, address: 01, and press the PAUSE button of the adjusting remote commander.
- 2) Set data: 00 to page: 6, address: 02.

6-2-15. Max Gain Adjustment (VC-179 (A)/179 (B) board)

Correct the differences in the minimum illuminance.

If the illuminance is not consistent, the image level required for taking subjects in low illuminance will not be produced (dark).

Subject	White pattern standard picture frame	
Measurement Point	VIDEO OUT terminal	
Measuring Instrument	Oscilloscope	
Adjustment Page	F	
Adjustment Address	15	
Specified Value	PCS-C150	
	A=450mV	
	PCS-C150P	
	A=460mV	

Adjusting method:

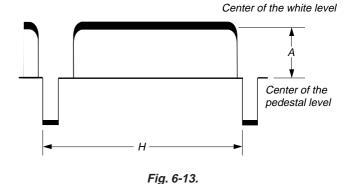

- 1) Set data: 01 to page: 6, address: 00.
- 2) Set data: 04 to page: F, address: 2D.
- 3) Set data: 19 to page: 6, address: 01, and press the PAUSE button of the adjusting remote commander.
- 4) Change the data of page: F, address: 15, and adjust so that the signal level (A) becomes the specified value.

Note: The data of address: 15 should be 70 to FF.

5) Press the PAUSE button of the adjusting remote commander.

Processing after completing adjustments

- 1) Set data: 00 to page: 6, address: 01, and press the PAUSE button of the adjusting remote commander.
- 2) Return the data page: F, address: 2D to an initialized value.

6-2-16. Auto White Balance Standard Data Input

Subject	White pattern standard picture frame
Adjustment Page	F
Adjustment Address	0C, 0D, 0E, 0F

Adjusting method:

- 1) Turn the power of the unit OFF/ON.
- 2) Set data: 01 to page: 6, address: 00.
- 3) Check that the data of page: 6, address: 11 is 00.
- 4) Wait for 2 seconds.
- 5) Set data: 11 to page: 6, address: 01, and press the PAUSE button of the adjusting remote commander.
- 6) Set data: 0D to page: 6, address: 01, and press the PAUSE button of the adjusting remote commander.
 - When the standard data is taken in, the data will be automatically input to addresses 0C to 0F of page F.
- 7) Check that the data of page: 6, address: 11 is 01.

Processing after completing adjustments

1) Set data: 00 to page: 6, address: 01, and press the PAUSE button of the adjusting remote commander.

6-2-17. Auto White Balance Adjustment

Adjust to the proper auto white balance output data.

If it is not correct, auto white balance and color reproducibility will be poor.

Subject	White pattern standard picture frame
Filter	Filter C14 for color temperature
rittei	correction
Measurement Point	Check with the 2 digits of page A
Measuring Instrument	displayed
Adjustment Page	F
Adjustment Address	11, 12
C 'C' 137.1	R ratio: 2B40 to 2BC0
Specified Value	B ratio: 5E00 to 5F00

Adjusting method:

- 1) Place the C14 filter for color temperature correction on the lens.
- 2) Set data: 01 to page: 6, address: 00.
- 3) Set data: D0 to page: F, address: 10, and press the PAUSE button of the adjusting remote commander.
- 4) Set data: 04 to page: 6, address: 02.
- 5) Change the data of page: F, address: 11, and adjust the average value of the page A display data to the R ratio specified value.
- 6) Press the PAUSE button of the adjusting remote commander.
- 7) Set data: 05 to page: 6, address: 02.
- 8) Change the data of page: F, address: 12, and adjust the average value of the page A display data to the B ratio specified value.
- 9) Press the PAUSE button of the adjusting remote commander.

Processing after completing adjustments

- 1) Set data: E0 to page: F, address: 10, and press the PAUSE button of the adjusting remote commander.
- 2) Set data: 00 to page: 6, address: 02.

6-2-18. White Balance Check

Subject	White pattern standard picture frame	
	Filter C14 for color temperature	
Filter	correction	
	ND filter 1.0 and 0.3	
Measurement Point	VIDEO OUT terminal	
Measuring Instrument	Vectorscope	
Specified Value	6-14 A to C	

Checking method:

- 1) Check that the lens is not covered with either filter.
- 2) Set data: 01 to page: 6, address: 00.
- 3) Set data: 0F to page: 6, address: 01, and press the PAUSE button of the adjusting remote commander.
- 4) Check that the center of the white luminance point is within the circle shown in Fig. 6-14. A.
- 5) Set data: 00 to page: 6, address: 01, and press the PAUSE button of the adjusting remote commander.
- 6) Set data: 23 to page: 6, address: 01, and press the PAUSE button of the adjusting remote commander.
- 7) Place the C14 filter on the lens.
- 8) Check that the center of the white luminance point settles in the circle shown in Fig. 6-14. B.
- 9) Remove the C14 filter, and place the ND filter $1.3\,(1.0+0.3)$ on the lens.
- 10) Check that the center of the white luminance point settles in the circle shown in Fig. 6-14. C.

Processing after completing adjustments

- 1) Set data: 00 to page: 6, address: 01, and press the PAUSE button of the adjusting remote commander.
- 2) Set data: 00 to page: 6, address: 00, and press the PAUSE button.

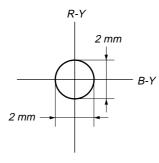

Fig. 6-14. A

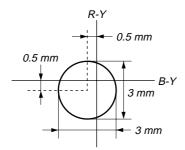

Fig. 6-14. B

6-2-19. VIDEO OUT Level Check

Subject	Color bar chart standard picture frame	
M (D)	VIDEO OUT terminal	
Measurement Point	(Terminated at 75Ω)	
Measuring Instrument	Oscilloscope	
	Y level	$=650\pm60 \text{mV (NTSC)}$
		$=630\pm60 mV~(PAL)$
Specified Value	SYNC level	$=286\pm40mV\;(NTSC)$
		$=300\pm40mV\;(PAL)$
	BURST level	$=286\pm40mV\;(NTSC)$
		$=300\pm40 mV~(PAL)$

Checking method:

1) Check that the Y level, SYNC level and BURST level satisfy the specified values.

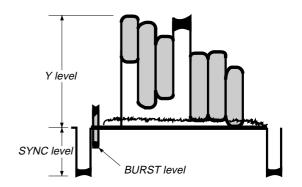

Fig. 6-15.

6-2-20. Page D Data Modification 2

After the camera adjustment, change the data of page D and address 01 to the following:

PCS-C150 (NTSC) Data: 04 PCS-C150P (PAL) Data: 05

6-2-21. Page 5 Data Initialization

Initializing method:

- 1) Page: B, address: 00, data: 01.
- 2) Check that the data of page: B, address: 02 is 00.
- 3) PCS-C150 (NTSC)

Set data: 80 to page: B, address: 01 and press the PAUSE button of the adjusting remote commander.

• PCS-C150P (PAL)

Set data: 81 to page: B, address: 01 and press the PAUSE button of the adjusting remote commander.

- 4) Check that the data of page: B, address: 02 is 01.
- 5) Turn off the main power supply once.

6-2-22. Home Position Adjustment

Home position adjustment for Pan-Tilter is performed automatically.

Adjustment Page	5
Adjustment Address	50, 51, 52, 53, 54, 55, 56, 57, 58, 59

Adjusting method:

- 1) Set data: 01 to page: B, address: 00.
- 2) Check that the data of page: B, address: 02 is 00.
- 3) Set data: 10 to page: B, address: 01 and press the PAUSE button of the adjusting remote commander.
- 4) Check that the data of page: B, address: 02 is 01.
- 5) Set data: 40 to page: 5, address: 5E and press the PAUSE button of the adjusting remote commander.
- 6) Turn off the main power supply once.

Note: When the camera block has been removed from the pan tilt mechanism chassis, be sure to perform Home Position Adjustment.

6-3. ELECTRICAL BLOCK CHECK

6-3-1. Pan Tilter Operation Check

Checking method:

- Use VISCA to send the commands to move the pan tilter horizontally and vertically.
- Drive the pan tilter to the top and bottom end points and to left and right end points.
- 3) Check that the tilter operates normally.

SECTION 7 VISCA COMMAND LIST

7-1. VISCA Summary

PCS-C150/C150P uses a protocol called VISCA. In VISCA, the computer or other device issuing the commands is called the controller and the PCS-C150/C150P or other device receiving those commands is called the peripheral device. Under VISCA, up to 7 VISCA Equipments can be connected to one controller using RS-232C communications. The RS-232C parameters are communications speed of 9600 baud, data length of 8 bits, 1 stop bit, 1 start bit, and no parity. Flow control, such as XON/XOFF and RTS/CTS, is not used. The VISCA Equipments are connected in a daisy chain. The actual internal connections form a one-way ring, as shown in the figure below, so messages pass through all the devices and return to the controller. Each device has an address on this network. The address of the controller is always 0. The addresses of the devices are numbered 1, 2, 3, etc., in order from closer to the controller to farther away. As part of the initialization operations, the controller sends the address command to set the addresses for the VISCA Equipments.

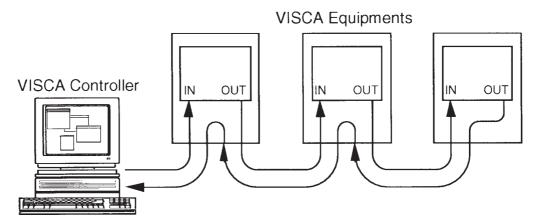

Fig. 7-1. VISCA Network

PCS-C150/C150P has a VISCA IN port and a VISCA OUT port. As viewed from the outside, both the VISCA IN and VISCA OUT ports have the connector pin layout shown in Fig. 7-2. During control by a computer, set the PCS-C150/C150P DTR input (the computer's S output) high.

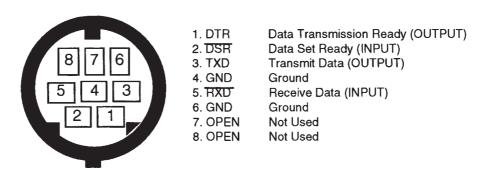

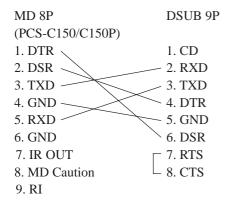

Fig. 7-2. VISCA Connector

7-2. PCS-C150/C150P VISCA Connection

MD 8P(D30)	MD 8P
(PCS-C150/C150P)	
1. DTR —	1. DTR
2. DSR	2. DSR
3. TXD <	3. TXD

8. MD Caution	8. OPEN

Fig. 7-3. VISCA Connection (Windows)

Fig. 7-4. VISCA Connection (Mac)

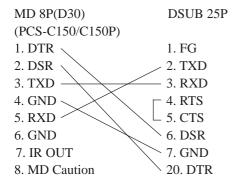

Fig. 7-5. VISCA Connection (PC98)

7-3. VISCA Communication Formats

7-3-1. VISCA Packet Structure

The basic unit for VISCA communications is the packet (shown in Fig. 7-6.). The first byte 1 in the packet is the header. It contains the sender and destination addresses. For example, the header for a packet sent from the computer at address 0 to PCS-C150/C150P at Address 1 is 81H (hexadecimal).

A packet sent to PCS-C150/C150P at Address 2 has a header of 82H. In the tables after pages 7-6, the header is listed as 8X. Insert the PCS-C150/C150P address in place of the X. The header for a packet sent in response from the PCS-C150/C150P at Address 1 is 90H. For a response packet form the PCS-C150/C150P at Address 2, the header is A0H.

Some of the setting commands (refer to Page 7-4) can be sent to all the equipment at one time (broadcast). For a broadcast, the header is

The terminator, FFH, ends the packet.

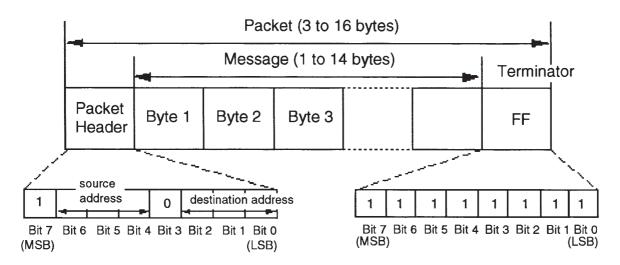

Fig. 7-6. VISCA Message Packet

7-3-2. Commands and Inquiries

Instruct the PCS-C150/C150P to carry out operations. **Commands: Inquiries:** Instruct the PCS-C150/C150P to Inquire about the condition.

> **Command Packet** Note

8X 01 RR ... FF Command RR = category code* RR = category code* 8X 09 RR ... FF Inquiry

*category code = 00 (Interface), 04 (camera), 06 (pan/tilter)

7-3-3. Responses to Commands and Inquiries

ACK message: Returned by PCS-C150/C150P when it has received a command.

Completion message: Returned by PCS-C150/C150P when it has completed execution of a command or inquiry. Please notice that it is returned when the micon of the camera starts to carry out the operation. For example Pan/Tilt, Zoom Tele/Wide or Focus Far/Near, it is returned before it has completed execution. Inspection for an inquiry instruction, the response

data is from the 3rd byte on of the message packet.

Reply Packet Note Y = socket numberX0 4Y FF Ack X0 5Y FF Y = socket numberCompletion (commands) Y = socket number Completion (Inquiries) X0 5Y ... FF

X = 9 to F: PCS-C150/C150P address + 8

Error message: The PCS-C150/C150P returnes an error message instead of a Completeion message when it cannot execute a command or inquiry instruction, or execution fails.

Error Packet Description X0 6Y 01 FF Message length error (>14bytes) X0 6Y 02 FF Syntax Error X0 6Y 03 FF Command buffer full X0 6Y 04 FF Command cancelled X0 6Y 05 FF No socket (to be cancelled) X0 6Y 41 FF Time out X0 6Y 43 FF Condition Error X = 1 to 7: PCS-C150/C150P address, Y =socket number

7-3-4. Socket Number

When a command message is sent to a PCS-C150/C150P, the controller usually waits for the completion message or error message from that PCS-C150/C150P before sending the next message. However, in order to provide higher level usage, the PCS-C150/C150P has two command buffers (memories) so it can receive up to two commands (including the one it is executing) at a time. When the PCS-C150/C150P receives a command, it sets the socket number in the ACK message to tell the controller which command buffer is used.

Since this socket number is also included in the completion message or error message, the controller can see which command was completed. Even when the PCS-C150/C150P is using both commands and inquiries, no ACK message is returned, but rather a completion message with Socket Number 0 is returned.

7-3-5. Command Execution Stop

To cancel a command that you have already sent, send the IF_Clear cammand. To cancel just one cammand when you have already sent two, use a cancel.

> **Cancel Packet** Note

8X 2Y FF Y = socket numberCancel

X = 1 to 7 : PCS-C150/C150P address, Y =socket number

X = 1 to 7: Address of PCS-C150/C150P.

7-4. PCS-C150/C150P Setting Commands (Network setting)

Before starting PCS-C150/C150P control, always broadcast the Address command and the IF_Clear command.

7-4-1. VISCA Network Management Commands

Address: Set the address for VISCA Equipments. This command is used when the network is initialized and when the network change

message below is received.

Network Change: This command is sent from VISCA Equipments to the controller when a device is removed from or added to the net-

work. When this message is received, the controller needs to reset the address.

Packet Notes

Address 88 30 01 FF Always broadcasted.

Network Change X0 38 FFX = 9 to F : PCS-C150/C150P address + 8

7-4-2. VISCA Interface Commands

IF_Clear: Clears the command buffers in the PCS-C150/C150P and stops the instruction being executed.

7-4-3. PCS-C150/C150P Functions

CAM_WB

1) Auto white balance (AWB)

For this unit's AWB, the TTL method is adopted to reproduce the colors of the subject as closely as possible by calculating the color data of the whole screen.

Furthermore, the white balance area is limited to prevent operations that show all objects as white from being performed when white balance operations are performed.

The area for performing the auto white balance is also changed by determining whether it is indoors or outdoors according to the brightness.

2) Preset white balance

The preset white balance can be selected from fixed indoors (3200K) and fixed outdoors (5800K).

3) One push white balance

The one push white balance is a function which, when once the subject is set to certain lighting conditions, will expose the subject under these conditions by gaining white forcibly.

The color is reproduced naturally without being affected by the surrounding conditions of the subject.

When set, the one-push white balance trigger is sent assuming that the white subject occupies more than 1/2 of the screen.

The one-push white balance data is provided when the lithium backup SW is ON even though the power is off (2 hours for fully-charged battery). When the lithium backup SW is off, the data will be lost when the power is turned off. Therefore, when turning off the power, set the one-push white balance again.

CAM_AE

1) Full auto

When the automatic exposure (AE) mode is set, the auto-iris, AGC (auto-gain), 1/60 sec shutter (PCS-C150P is 1/50 sec shutter) will operate.

When the power supply is turned on with the lithium backup off, the automatic exposure mode will be set.

2) Manual

When the manual mode is set, iris, gain and shutter will be set separately.

3) Bright Control

Bright Control is an adjustment function of the brightness with the combination of gain and iris. When in darkness, gain controls exposure and when in the brightness, iris controls exposure. Since both gain and iris are fixed, this function is useful when capturing images under fixed brightness condition. The status at auto exposure will be held once when changing the mode from auto exposure to Bright Control.

STEP	GAIN	IRIS	STEP	GAIN	IRIS	STEP	GAIN	IRIS
1	18dB	F1.8	9	0dB	F2.4	17	0dB	F9.6
2	15dB	F1.8	10	0dB	F2.8	18	0dB	F11
3	12dB	F1.8	11	0dB	F3.4	19	0dB	F14
4	9dB	F1.8	12	0dB	F4	20	0dB	F16
5	6dB	F1.8	13	0dB	F4.8	21	0dB	F19
6	3dB	F1.8	14	0dB	F5.6	22	0dB	F22
7	0dB	F1.8	15	0dB	F6.8	23	0dB	F28
8	0dB	F2.0	16	0dB	F8	24	0dB	CLOSE

Table. 7-1.

4) Shutter priority mode

The iris value is automatically adjusted to the electronic shutter selected (28 levels). Gain is also adjusted automatically.

5) Iris priority mode

Corresponding to selected iris position (17 different positions), shutter speed is adjusted automatically. Gain is in auto mode.

CAM_Back light

The backlight compensation function increases the brightness in the automatic exposure mode and shutter priority exposure mode (auto-iris AGC). It is useful for correcting the images of subjects which have turned out dark due to background light (sunlight, lamps, etc.). The brightness, when this function is off (auto iris, AGC), is taken as a reference, and the brightness can be increased up to 12 dB. Although the subject becomes brighter, the background will become white and saturate.

The iris and gain operations remain in the auto mode.

CAM_Position Preset

Camera functions can be preset in 6 different ways using the position preset function.

Using this function pan/tilt, zoom position, focus (auto, manual positions), white balance, shutter, bright control (iris, gain) can be set to the desired state instantaneously without adjusting backlight compensation each time.

Table. 7-6

7-8. VISCA Communications Examples

Network initialization (The receiving data is for when 3 VISCA devices are connected.)

Sending	Receiving	Function
88 01 00 01 FF		Clear message (broadcast)
	88 01 00 01 FF	Reply to Clear message
88 30 01 FF		Address message (broadcast)
	88 30 04 FF	Reply to Address message (broadcast)

The 3rd byte of the reply to an address message is the number of connected devices plus 1. In this example, three devices are connected, so this byte is 04.

Setting the focus position of the first PCS-C150/C150P to 0105H.

Sending	Receiving	Function
88 01 04 48 00 01 00 05 FF		Focus Direct command
	90 41 FF	ACK of Focus Direct command
	90 51 FF	Focus Direct command completed

Setting the focus position of the first PCS-C150/C150P to 0105H.

Sending	Receiving	Function
81 01 04 07 02 FF		Zoom Tele command
	90 41 FF	ACK of Zoom Tele command
	90 51 FF	Zoom Tele command completed (zoom tele starts)
81 01 04 07 00 FF		Zoom Stop command
	90 41 FF	ACK of Zoom Stop command
	90 51 FF	Zoom Stop command completed (zoom tele stops)

CAM_Zoom Tele/Wide and CAM_Focus Far/Near work until Camera_Zoom Stop, Camera_Focus Stop or other command is sent. CAM_Zoom Tele/Wide and CAM_Focus Far/Near can not be sent simultaniousely.

Inquiry about whether AF is ON or OFF, the position of zoom and the position of focus. (In case it is inquired continually)

Sending	Receiving	Function
81 09 04 47 FF		ZoomInq command
	90 41 FF	ACK of ZoomInq command (socket 1)
81 09 04 38 FF		AFModeInq command
	90 50 02 FF	Auto Focus Mode
81 09 04 48 FF		FocusInq command
	90 42 FF	ACK of FocusInq command (socket 2)
	90 51 00 02 01 0E FF	Zoom Position 021EH (socket 1)
	90 52 00 01 00 05 FF	Focus Position 0105H (socket 2)

In case of Inquiry command, it might take around 0.5 second to receive the reply after the command is sent.

In case of sending the second command before receiving the first reply, ACK socket number and the completion message socket number should be checked.

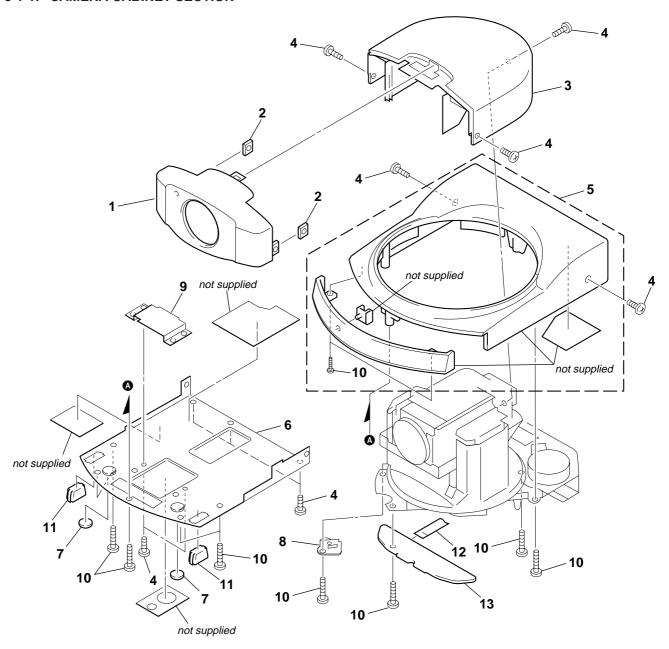

SECTION 8 REPAIR PARTS LIST

8-1. EXPLODED VIEWS

NOTE

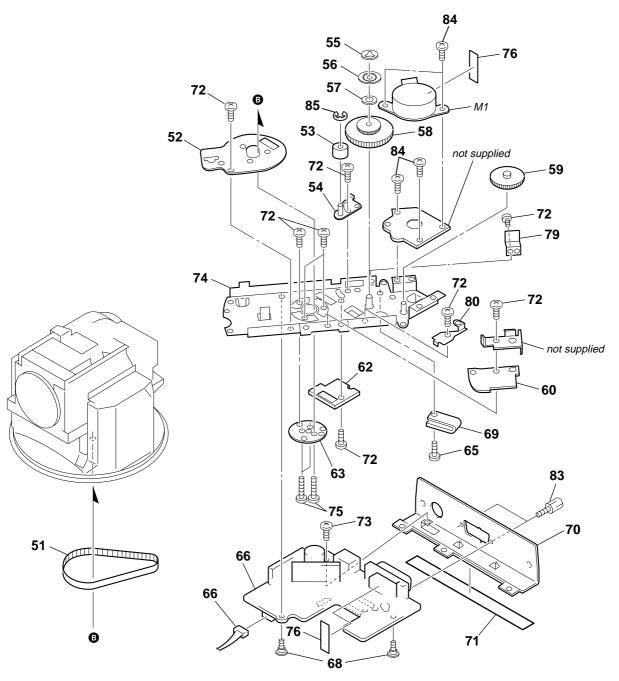

- The mechanical parts with no reference number in the exploded views are not supplied.
 Items marked "*" are not stocked since
- Items marked "*" are not stocked since they are seldom required for routine service.
 Some delay should be anticipated when ordering these items.
- -XX and -X mean standardized parts, so they may have some difference from the original one.
- Hardware (# mark) list and accessories and packing materials are given in the last of this parts list.

8-2. ELECTRICAL PARTS LIST

NOTE:

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- -XX and -X mean standardized parts, so they may have some difference from the original one.
- RESISTORS
 All resistors are in ohms.
 METAL:Metal-film resistor.
 METAL OXIDE: Metal oxide-film resistor.
 F:nonflammable
- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- SEMICONDUCTORS
 In each case, u : μ, for example:
 uA.. : μA.. uPA.. : μPA..
 uPB.. : μPB.. uPC.. : μPC.. uPD.. : μPD..
- CAPACITORS

 uF: μF
 COILS

 uH: μH

When indicating parts by reference number, please include the board.
